UNIVERSITY OF NEW HAMPSHIRE
CONSTRUCTION AND RENOVATION STANDARDS

The standards set forth in this document are in addition to all required compliance to codes and regulations. Where in conflict with applicable codes or regulations, the code or regulation shall take precedence over these standards.

These standards are intended to guide planners and designers preparing facility construction and renovation projects for the UNH campus at Durham. Some sections are suitable for direct inclusion in contract specifications with little or no modification. However, the general intent is that these standards address areas where UNH has specific requirements that exceed normally accepted design and construction practice or where certain materials or equipment systems have been selected to insure campus-wide consistency. Designers are expected to reflect these requirements in construction documents prepared for the project. Incorporating these standards in construction contracts by blanket reference will normally not be acceptable.
